

Abstract of the Disclosure

A unit is composed in such a manner that the circuit board is fixed along the back face of the plug housing into which the contacts are incorporated. The plug type connector is assembled in such a manner that the cover housing is slid in parallel with the surface of the circuit board and incorporated into the unit. At this time, the edge section of the circuit board and the edge section of the plug housing, which is set along the circuit board, are introduced into the guide groove of the cover housing.
